ASSET POINT

## THE SYSTEM OF RECORD FOR YOUR DATA CENTER

WHAT IS IT

Asset Point® is a Data Center Infrastructure Management (DCIM) SaaS platform. Organizations use Asset Point to inventory, locate, plan, modernize, migrate, and operate critical IT infrastructure across the data center lifecycle.

WHY IT MATTERS

Managing IT infrastructure across data centers can become complex as environments change. Without a centralized system of record, organizations lack a reliable view of their infrastructure. Operating with incomplete or outdated data makes it harder to safely execute migrations and other infrastructure changes, often leading to planning errors, inefficient use of data center capacity, and delayed incident response.

HOW IT WORKS

ASSET POINT SUPPORTS THE FULL LIFECYCLE OF YOUR DATA CENTER INFRASTRUCTURE:

DISCOVER & INVENTORY

Capture and track IT hardware and infrastructure assets across the data center environment.

ASSESS CURRENT STATE

Use dashboards, reporting, and visualizations (including floorplans, cabinet elevations, and rack views) to understand infrastructure inventory, asset locations, and capacity across sites.

PLAN FOR MODERNIZATION

Use asset lifecycle data to identify aging infrastructure and uncover opportunities to optimize space, power, and cooling.

MANAGE & OPERATE

Leverage centralized dashboards and reporting to manage infrastructure while maintaining a validated system of record.

WHAT YOU GAIN

✔ Complete visibility into data center hardware and infrastructure

✔ Accurate inventory of servers, storage, network, and supporting infrastructure

✔ Insight into space, power, cooling, and capacity planning

✔ Improved planning for modernization, migrations, and infrastructure changes

✔ Extended technology lifespan

✔ Reduced costs and minimized risks
