Success Story | DPR Construction

Align Migrates Three DPR Companies to One, Cloud-Centric Tenant

The Overview

DPR Construction, a global commercial construction management firm specializing in sustainable projects, developed a venture onboarding strategy known as "One DPR". The intent was to migrate their three independent companies (i.e. Digital Buildings Components, SurePods & GPLA), as well as all future ventures, to a single, cloud-centric tenant.

Because each company contained on-site infrastructure with approximately 200 users, DPR engaged Align as their migration partner to provide project management and engineering services.

The Solution

The Align Engineering team leveraged their technical expertise and BitTitan's leading migration tool to discover, plan and migrate all user mail, archive, OneDrive, O365 Groups, Teams and SharePoint sites. We paired our Project Management methodologies with the Align Migration Solution to ensure all data was migrated securely and efficiently from Digital Buildings Components, SurePods and GPLA to a single DPR tenant.

For this project, Align took the following approach:

Assessment:

- Identity Review
- Gathered Details About the Microsoft365 Platform Environment
- Server Data Review
- Identify Migration Tools
- Design Future End-Point Configuration

Migration:

- Defined Data Migration Requirements
- Identity Provisioning, Licensing & Consolidation
- Data Prestaging & Migration
- Network Refresh
- Cloud-focused End-Point

Post-Migration:

- Managed Remediation Tasks (air log)
- Canceled/Updated Microsoft365 Subscriptions
- Decommissioned Legacy infrastructure
- Provided On-Going Support

Our team followed Align's proven migration framework:

The Results

Align successfully consolidated the three companies into a single cloud-centric tenant over the course of three months. Our team performed one cut-over per weekend in order to complete the project in a time sensitive manner and ensure the business could function seamlessly by the first business day of each week with minimal downtime and risk to the company. We seamlessly migrated the mail, archive, and OneDrive for over 200 users, including over 150 Microsoft Teams, SharePoint, and Office365 groups.
